Subject: GLYPHOSATE NSRL
Date: Wednesday, June 21, 2017 2:11:22 PM

Researchers have found that the so-called “inert” ingredients in Monsanto’s Round-Up weedkiller are more dangerous in combination with glyphosate than the chemical alone. POEA (polyethoxylated tallow amine , which shows up in Round-up Classic and Round-up Original was found in tests to be between 1,200 and 2,000 times more toxic to cells than glyphosate.

Dr. Gilles Eric Seralini, and his famous rat study found the toxic effects of glyphosate caused sterile rats by the third generation. Couples in the United States suffering from their inability to conceive has been apparent for sometime.

Who in their right mind sprays poison on their food. Only those influenced by the money gained through pesticides use.

It is time for a new approach to growing our food and only through laws that eliminate pesticide use will our farmers change their way of farming. California now has an opportunity to lead America by outlawing glyphosate. It will save our children who are suffering and protect family health. The time has come for a change, leadership, and hope.
